

Evallo Recruit

PRODUCT REQUIREMENTS DOCUMENT

Education-specialized talent discovery, candidate profiles, and company recruiting

Version 1.0 • 30 July 2026 • Draft for product and engineering

Document item	Definition
Product owner	Evallo
Primary users	Educators, candidates, recruiters, and education businesses
Core model	One human account; optional candidate profile; multiple company entities and company memberships
Launch approach	MVP pilot with a limited set of businesses and candidates, followed by evidence-led expansion

Product rule: Foundational account decision

The product does not create permanent “candidate accounts” and “recruiter accounts.” Every person has one global account. A person may create and publish a candidate profile, create or join one or more company entities, and use both sides of the marketplace from the same login.

Prepared for product design, engineering, QA, growth, and pilot operations

Document purpose and status

This PRD defines the end-to-end experience for Evallo Recruit from public discovery and authentication through company creation, recruiter workflows, candidate profile creation, talent search, expressions of interest, messaging, and hiring pipeline management. It is intended to be sufficiently detailed for information architecture, UI design, engineering estimation, QA planning, and pilot preparation.

Item	Decision
Status	Product-definition draft; suitable for design and engineering decomposition.
MVP lens	Prioritize high-quality profiles, discoverability, interest capture, search, and a lightweight recruiter pipeline. Avoid building a full ATS before validating demand.
Public/private boundary	Company profiles are public and indexable. Candidate profiles are not indexed and are visible only under candidate-controlled rules to authenticated recruiters.
Job model	Detailed job postings are optional. Companies may simply mark themselves as hiring and select role categories, employment types, and locations.
Primary interaction	Candidates can express interest in a company or a lightweight hiring role with one action. Recruiters can search, review, contact, and progress candidates.

Contents

- 1. Executive summary
- 2. Product vision, problem, and strategy
- 3. Goals, non-goals, and success metrics
- 4. Users, entities, permissions, and terminology

- 19. Non-functional requirements
- 20. MVP, phased roadmap, and dependencies
- 21. Acceptance criteria and QA scenarios
- Appendices: screen inventory, question banks, filters, and status definitions

1. Executive summary

Evallo Recruit is an education-specialized talent platform designed to help education businesses discover, evaluate, and recruit educators while giving educators a structured professional profile that goes far beyond a resume. The platform serves as an inbound acquisition engine for Evallo: both sides of the marketplace—education businesses and individual educators—are potential users of Evallo’s broader products.

The product’s differentiator is not a conventional job board. Its defensible value is a structured educator evidence layer: qualifications, teaching experience, certifications, subject expertise, learner segments, curriculum familiarity, verified assessment results, sample teaching videos, written teaching responses, work preferences, references, and outcomes are assembled into one recruiter-ready profile.

Thesis: Core product thesis

Recruitment is the entry point. Structured educator evidence, trusted company profiles, and direct marketplace relationships create the long-term platform value.

1.1 Product experience in one paragraph

A visitor can discover public company pages through Google or direct links. A company may display “Currently hiring” and select the roles it needs without publishing formal job descriptions. A candidate can express interest in the company; if not signed in, the platform guides them through email verification and candidate-profile completion. Authenticated company recruiters receive the candidate in an interest inbox and can inspect the profile, message the candidate, add internal notes, and progress the person through a lightweight pipeline. Recruiters can also proactively search the private candidate network using education-specific criteria.

1.2 MVP value propositions

Audience	Immediate value	Why Evallo Recruit is better
Education business	Find relevant educators faster; reduce manual screening; collect inbound interest; maintain a hiring pipeline.	Education-specific filters, evidence-rich profiles, built-in assessments, and lightweight hiring intent without mandatory job-description overhead.
Candidate / educator	Create one professional profile; demonstrate capability; discover companies; express interest; receive relevant opportunities.	A profile designed for teaching and education roles rather than generic employment history.
Evallo	Create a strong inbound channel and relationships with businesses and individual educators.	Marketplace interactions can lead to adoption of Evallo’s broader operational products.

2. Product vision, problem, and strategy

2.1 Problem statement

- **Generic recruitment platforms:** Resumes and generic screening questions do not adequately represent teaching ability, test scores, curriculum experience, learner outcomes, or classroom practice.
- **Tutor marketplaces:** Many existing platforms connect individual students with tutors for one-off lessons rather than helping education businesses recruit full-time, part-time, contractual, or internship talent.
- **Education businesses:** Recruiters repeatedly collect the same evidence across applications, emails, interviews, and file attachments, creating slow and inconsistent screening.
- **Educators:** Candidates lack a single professional profile that can credibly demonstrate teaching expertise, methods, credentials, samples, and preferences.
- **Evallo go-to-market:** A bootstrapped product needs an inbound mechanism that is more immediate than SEO and less expensive than a large outbound sales operation.

2.2 Vision

Become the professional identity and talent-discovery layer for the education ecosystem: a place where educators can demonstrate how they teach and where education organizations can evaluate fit using structured, comparable evidence.

2.3 Strategic wedge

Stage	User value	Evallo strategic value
1. Public company presence	Businesses gain an indexable hiring page and inbound interest.	Acquires education businesses before selling operational software.
2. Candidate profiles	Educators gain a reusable professional identity.	Acquires individual educators and creates a proprietary evidence graph.
3. Search and matching	Recruiters source talent; candidates discover organizations.	Creates repeat usage and network effects.
4. Hiring workflow	Both parties communicate and progress decisions in-platform.	Increases retention and relationship depth.
5. Product expansion	Organizations may adopt CRM, scheduling, billing, PrepWork, and assessments.	Converts marketplace trust into broader Evallo usage.

3. Goals, non-goals, and success metrics

3.1 Product goals

1. Allow any person to create one global account and later use candidate and recruiter capabilities without duplicate accounts.
2. Allow education businesses to create public, Google-indexable company pages and advertise lightweight hiring intent.
3. Allow candidates to create comprehensive, professional educator profiles that are sufficient for serious recruiter evaluation.
4. Allow candidates to express interest in a company or hiring role with minimal friction.

5. Allow recruiters to search and filter candidates using education-specific criteria and evidence.
6. Allow recruiters to manage inbound and sourced candidates through a lightweight hiring workflow.
7. Keep candidate contact and personal data under explicit privacy controls while preserving recruiter utility.
8. Validate marketplace demand through pilots before expanding into a full applicant-tracking system.

3.2 Non-goals for MVP

- Payroll, contracts, timesheets, employee onboarding, or background-check execution.
- A full enterprise ATS with complex requisition approvals, interview panels, offer-letter generation, and HRIS integrations.
- Student-to-tutor lesson booking or a consumer tutoring marketplace.
- Publicly indexable candidate profiles.
- Mandatory formal job descriptions for companies that only want to indicate general hiring needs.
- Automated candidate ranking that makes final hiring decisions without recruiter review.
- Native video recording and hosting in MVP; videos may be embedded from approved providers such as YouTube.

3.3 Success metrics

Metric	Definition	Initial target / interpretation
Verified account conversion	Percentage of sign-up initiations that verify email and create a password.	Monitor by source; target should improve over pilot rather than use a fixed pre-launch benchmark.
Candidate profile completion	Percentage of verified accounts that publish a discoverable candidate profile.	Measure core completion and evidence-rich completion separately.
Company publication	Percentage of recruiter-intent users who publish a company profile.	Track time from account verification to public page.
Hiring activation	Published companies that mark themselves currently hiring and select at least one role.	Core recruiter activation event.
Candidate interest rate	Company-page viewers who submit an expression of interest.	Separate logged-in and anonymous-to-sign-up conversion.
Recruiter response rate	Interests that receive a recruiter action within seven days.	Important marketplace trust signal.
Search-to-shortlist rate	Recruiter candidate-profile views that result in shortlist, message, or pipeline addition.	Measures profile quality and search relevance.
Connection outcome	Interests or sourced candidates that reach screening, interview, offer, or hired.	Primary proof-of-concept metric.
Profile evidence depth	Average number of verified credentials, assessments, work samples, and videos per completed profile.	Measures defensibility beyond resume data.
Pilot retention	Businesses returning to search, review interest, or update pipeline in subsequent weeks.	Better than vanity registration counts.

4. Users, entities, permissions, and terminology

Architecture: Account architecture

Candidate and recruiter are capabilities, not exclusive account types. Every user can create a candidate profile and can create or join multiple companies. Recruiter permissions are granted through company membership.

4.1 Primary entities

Entity	Definition	Cardinality / rule
User account	The authenticated human identity used for login, notifications, personal settings, and ownership.	One per person. One global login.
Personal profile	Basic identity layer: name, photo, headline, location, languages, and account-level settings.	One per user; may remain minimal.
Candidate profile	The structured educator profile used for talent discovery and hiring.	Zero or one active profile per user in MVP; draft and archived states supported.
Company entity	A public organization profile representing a tutoring business, school, college, education company, or related organization.	A user may create or join multiple companies.
Company membership	Relationship connecting a user to a company with a role and permissions.	Many users per company; many companies per user.
Recruiter identity	A user acting through a company membership to search, view, message, and manage candidates.	Not a separate account or standalone entity.
Hiring intent	A lightweight declaration that a company is hiring for one or more role categories, work types, and locations.	Multiple active intents per company; detailed job description optional.
Expression of interest	A candidate's explicit interest in a company or selected hiring intent.	One active record per candidate-company-intent combination, with history.
Candidate pipeline entry	A company-specific record tracking a candidate's stage, source, notes, owner, and activity.	One active entry per candidate per company; may relate to multiple role intents.
Assessment / evidence item	Credential, score report, file, link, result, verification, reference, or work sample attached to a candidate profile.	Many per candidate.

4.2 Company membership roles

Role	Core permissions	Restrictions
Owner	Full company control; billing-ready ownership; transfer ownership; delete or archive company; manage all members and settings.	At least one owner is required.
Admin	Edit company page, hiring intents, team, search, pipeline, messages, and settings.	Cannot delete company or transfer ownership unless explicitly granted.

Role	Core permissions	Restrictions
Recruiter	Search candidates, review interests, message, add notes, and update pipeline.	Cannot manage ownership, sensitive company settings, or member roles by default.
Hiring manager	Review assigned candidates, comment, message, and make stage recommendations.	Limited to assigned pipelines or intents.
Viewer	Read-only access to candidate profiles and selected pipeline views.	Cannot message, export, or alter records.

4.3 Candidate visibility states

State	Discoverability	Recruiter access
Draft	Not discoverable and not shareable through interest.	User only.
Private	Not included in search. Candidate can still share with specific companies through expression of interest.	Only companies explicitly granted access.
Discoverable	Included in authenticated recruiter search according to privacy settings.	Authenticated company members with candidate-view permission.
Paused	Temporarily hidden from new searches; existing company relationships remain accessible.	Existing authorized companies only.
Archived	Profile unavailable for active use but retained subject to policy.	User and authorized internal support only.

5. Product principles and information architecture

5.1 Experience principles

- **One account, optional layers:** Authentication should never ask users to permanently declare themselves candidate or recruiter.
- **Progressive disclosure:** Collect only the minimum required information at account creation. Move detailed candidate and company data into guided onboarding after verification.
- **Evidence over claims:** Profiles should privilege verified scores, credentials, samples, outcomes, and structured answers over generic self-description.
- **Lightweight hiring intent:** Companies can say they are hiring and choose role categories without writing a formal job post.
- **Public businesses, private candidates:** Company pages support discovery and SEO. Candidate profiles remain controlled, authenticated, and non-indexed.
- **Minimal interface:** Use white space, #0671E0 actions, #0A0A0B primary text, understated borders, floating labels, and one focused task per onboarding screen.
- **Actionable profiles:** Every major profile section should support recruiter filtering, evidence inspection, or hiring conversation.
- **Reversible choices:** Users can create, pause, revise, or change paths later without creating another account.

5.2 Global product navigation

Context	Primary navigation	Notes
Anonymous / public	Discover companies; company profile; sign in; create account.	Candidate search and candidate profiles are unavailable.
Signed-in user without candidate/company	Home; Explore companies; Start candidate profile; Create company; Account settings.	Home emphasizes next setup actions.
Candidate mode	Home; My profile; Companies; Interests; Messages; Assessments; Settings.	Profile preview and visibility are persistent actions.
Company / recruiter mode	Company home; Talent search; Interests; Pipeline; Messages; Company profile; Hiring; Team; Settings.	Company switcher is always available for multi-company users.
User with both capabilities	Combined home plus a clear context switcher between personal/candidate context and company context.	Do not duplicate account settings.

5.3 Screen segregation principle

The application should separate screens by the object being managed rather than by permanent user type. Personal/candidate screens manage the user's professional identity and applications. Company screens manage an organization, hiring intent, team access, search, and pipeline. A context switcher should show "Personal" and every company the user belongs to.

Surface	Owned by	Examples
Account surfaces	User	Authentication, password, security, notification preferences, connected sign-in methods.
Personal surfaces	User	Name, photo, location, personal headline, candidate profile, interests, messages.
Company surfaces	Company entity	Public profile, hiring intents, candidate search, interest inbox, pipeline, team.
Marketplace surfaces	Platform	Company directory, search results, recommendations, public company pages.

6. Shared authentication and account onboarding

6.1 Shared authentication journey

Sign-up and login are global. The account creation process does not collect role preferences, company details, candidate details, or a password on the first screen. Email ownership is verified first; the password is created only after the verification link is opened.

Step	Screen / action	Required behavior
1	Create account	Email-only form with Google and Microsoft alternatives. Floating-label field. CTA: “Send verification link.”
2	Verification sent	Confirmation state shows masked email, resend action with rate limit, change-email action, and support guidance.
3	Email link opened	Validate token, mark email verified, and show password-creation page. Invalid/expired tokens offer resend.
4	Set password	Password and confirm-password fields, requirements, strength feedback, show/hide, continue.
5	Basic personal setup	Collect full name; optional profile photo, location/time zone, and headline can be deferred.
6	First action	Ask “What would you like to do first?”: create candidate profile, create company, or explore. This is a routing choice, not a permanent role choice.
7	Workspace	User lands in a universal home with setup prompts and context switcher.

6.2 Sign-up page requirements

Screen ID	Screen	Purpose	Primary requirements
AUTH-01	Create account	Start account creation with minimal friction.	Email floating-label field; send verification link; Google/Microsoft sign-up; sign-in link; terms/privacy acknowledgement; no password, name, role, or company questions.
AUTH-02	Verification sent	Confirm next action and reduce duplicate attempts.	Show masked email; resend after cooldown; change email; open-email-app deep link where supported; clear spam-folder guidance.
AUTH-03	Set password	Complete credential creation after verified email.	Password + confirmation; strength and validation; show/hide; prevent common compromised passwords if service available; continue.
AUTH-04	Account setup name	Create minimum human identity.	Full name required; floating label; optional photo deferred; continue.
AUTH-05	First-action router	Route without locking user type.	Create candidate profile; create company; explore platform; statement that all actions remain available later.

6.3 Login and recovery requirements

Screen ID	Screen	Purpose	Primary requirements
AUTH-10	Sign in	Global login for every account capability.	Email and password; Google/Microsoft; remember me; forgot password; link to account creation.
AUTH-11	Forgot password	Request password reset.	Email floating label; privacy-safe confirmation regardless of account existence; rate limiting.
AUTH-12	Reset password	Set a new password through token.	New + confirm; token validation; invalidate older reset tokens; sign out existing sessions option.
AUTH-13	SSO conflict resolution	Handle an email already associated with password or another provider.	Prompt secure linking after proof of account ownership; never silently create duplicate accounts.
AUTH-14	Session and context return	Return users to their intended action after authentication.	Preserve company page, interest CTA, invite, or profile destination through login.

6.4 Authentication edge cases

- Email already registered: direct the person to sign in or recover password; provide SSO method hints without exposing unnecessary account data.
- Unverified email attempts sign-in: resend verification and preserve intended destination.
- Expired verification token: show a single-click resend flow rather than an error dead end.
- User initiated interest before sign-up: after verification and required candidate-profile completion, return to the original company and finish submission.
- Invited company member signs up: preserve company invitation and join only after email verification.
- Account deletion and recreation: apply retention, abuse, and identity rules; do not create immediate duplicate candidate profiles.

7. Recruiter journey

Recruiter capability begins when a user creates or joins a company. The user remains the same global account; the company becomes a new organizational context. A recruiter may belong to multiple companies and switch between them.

7.1 Recruiter journey overview

Phase	Recruiter goal	Primary screens / outcome
A. Enter company context	Create a company or accept an invitation.	Company setup wizard or invitation acceptance.
B. Publish trust layer	Create a public company page that candidates can evaluate.	Company basics, brand, description, locations, services, public preview.
C. Declare hiring intent	Mark company as currently hiring and select role categories.	Hiring settings; role, work type, location, modality, experience preference.
D. Receive inbound interest	Review candidates who express interest from public company pages.	Interest inbox, candidate profile viewer, triage actions.
E. Proactively source	Search the private candidate network.	Talent search, filters, saved search, candidate results.
F. Evaluate and engage	Inspect evidence, message, shortlist, and capture internal notes.	Candidate profile, messages, shortlist, pipeline.
G. Progress decision	Move candidates through stages and record outcome.	Pipeline board/list, activity log, rejection/archive/hire.
H. Improve employer presence	Update company page and hiring needs based on outcomes.	Analytics, public page editor, hiring-intent management.

7.2 Company creation and recruiter onboarding

Company creation is a guided wizard. The initial flow should be short enough to publish a credible page quickly, with optional enrichment available afterward.

Screen ID	Screen	Purpose	Primary requirements
REC-01	Create or join company	Enter recruiter capability.	Options: create company, enter invitation code, accept pending invitations, search/claim existing company if duplication safeguards allow.
REC-02	Company basics	Create entity identity.	Company name, website, organization type, headquarters country/location, primary domain, public slug availability.
REC-03	Brand and overview	Make page trustworthy.	Logo, cover image optional, short tagline, full description, founding year optional, company size range, verified domains.
REC-04	Education footprint	Describe services and audience.	Education segments, subjects, tests, learner age groups, delivery mode, locations served, curriculum systems.
REC-05	Hiring intent	Declare current needs.	Currently hiring toggle; role categories; employment types; modality; locations/time zones; experience level; detailed

Screen ID	Screen	Purpose	Primary requirements
			role description optional.
REC-06	Preview and publish	Review public page.	Desktop/mobile preview, SEO title/description preview, publish state, missing-content warnings.
REC-07	Invite team	Add company members.	Invite by email; assign role; invite expiration; resend/revoke; optional skip.

7.3 Company creation field requirements

Section	Required fields	Optional enrichment
Identity	Company name; public slug; organization type; primary country.	Website; verified email domain; founding year; legal name.
Brand	Logo or generated initials; short tagline.	Cover image; brand color within accessibility constraints.
Overview	Short summary; full description; education-business category.	Mission, values, culture, teaching philosophy, accreditation, awards.
Footprint	Delivery mode; service regions; primary learner segments.	Office locations, time zones, school systems, curricula, languages.
Programs	At least one service or education category.	Subjects, tests, grades, counseling areas, degree programs, specializations.
Hiring	Currently hiring status; at least one role if active.	Employment type, schedule, compensation range, work authorization, detailed description, application questions.
Trust	Creator identity and company relationship.	Domain verification, registration document, external profiles, testimonials.

7.4 Public company profile

Every published company has a stable public URL and is visible without login. The page is designed both for candidate conversion and search-engine discovery.

Page block	Content	Rules
Hero	Logo, company name, tagline, location, organization type, website, verified badge, “Currently hiring” state.	Primary CTA changes based on hiring status and authentication state.
About	Short and long description, mission, values, learner population, delivery model.	Support rich text with strict formatting limits.
Programs and expertise	Subjects, tests, curricula, grade bands, counseling areas, program categories.	Taxonomy-linked for discovery and search.
Why work here	Culture, teaching approach, training, career development, team model, benefits.	Optional; encourage evidence rather than generic claims.
Locations and work model	Physical locations, remote/hybrid status, service regions, time zones.	Structured fields plus map links optional.

Page block	Content	Rules
Currently hiring	Role categories, employment types, delivery mode, location, experience bands, short note.	Detailed job descriptions are optional; each role intent gets an interest action.
Team	Public team members who opt in to appear.	Recruiter identity may be shown only with member consent.
Trust and links	Verified domain, website, social/company links, accreditation, awards.	External links open safely; validation and moderation apply.

7.5 Hiring intent model

MVP rule: No mandatory job description

A company may activate hiring with only role category, work arrangement, employment type, location/time zone, and optional short note. The platform should not force ATS-style requisition setup before a company can receive interest.

Field	Requirement
Status	Draft, active, paused, closed, archived.
Role category	One or more platform role types such as private tutor, teacher, professor, counselor, academic coach, curriculum designer, administrator, or content specialist.
Specialization	Subjects, tests, grade bands, curricula, counseling domain, discipline, or program area.
Engagement	Full-time, part-time, contract, freelance, internship, substitute, seasonal, volunteer.
Delivery	On-site, remote, hybrid; synchronous/asynchronous where relevant.
Location	Country, city/region, eligible time zones, relocation expectations.
Experience	Entry, early career, experienced, senior/lead; minimum years optional.
Availability	Immediate, target start month, recurring seasonal need, always accepting interest.
Compensation	Optional range and currency; may be hidden until conversation.
Description	Optional short note or full role description; support attachments/links post-MVP.
Interest questions	Zero to three lightweight company-specific questions; avoid duplicating profile data.

7.6 Recruiter dashboard

Screen ID	Screen	Purpose	Primary requirements
REC-10	Company home	Summarize activity and next actions.	New interests, unread messages, pipeline changes, active hiring intents, profile views, suggested candidates, incomplete company tasks.
REC-11	Interest inbox	Triage inbound candidate interest.	Filters by role/date/status; candidate summary; profile-completeness indicator; quick actions: view, shortlist,

Screen ID	Screen	Purpose	Primary requirements
			message, archive, reject.
REC-12	Talent search	Proactively source candidates.	Keyword and structured filters; sort; saved searches; results cards; privacy-respecting profile access.
REC-13	Candidate profile viewer	Evaluate a candidate comprehensively.	Sticky actions, section navigation, evidence preview, videos, credentials, assessments, preferences, notes, access log.
REC-14	Pipeline	Manage candidate stages.	Board and list views; stage drag/drop; owner; role tags; source; next action; bulk actions.
REC-15	Messages	Communicate in-platform.	Threads grouped by candidate/company; attachments with limits; templates optional; unread states.
REC-16	Hiring intents	Manage active needs.	Create, edit, pause, close, duplicate; see interest and pipeline metrics.
REC-17	Company profile editor	Maintain public page.	Draft/published preview; edit sections; SEO controls; audit history.
REC-18	Team and permissions	Manage access.	Members, roles, invitations, deactivation, ownership transfer, access audit.
REC-19	Recruiter settings	Configure workflow.	Default pipeline stages, notification rules, candidate privacy acknowledgement, data export permissions.

7.7 Talent search experience

The search experience should feel closer to a structured talent database than a generic keyword search. Recruiters can combine filters, save searches, and inspect why each candidate matches. Search results must never reveal candidates outside their visibility settings.

Filter group	Examples
Role and career intent	Educator role types; desired roles; leadership interest; open-to-work status.
Subject and program expertise	Subjects, standardized tests, grade bands, university disciplines, counseling domains, special education areas.
Teaching environment	One-to-one, small group, classroom, lecture hall, online, hybrid, asynchronous, lab, field-based.
Curriculum and standards	AP, IB, Cambridge, national/state boards, Common Core, specific university systems, proprietary curricula.
Experience	Years, total learners taught, class-size experience, institutions, employer types, leadership, curriculum ownership.
Evidence	Verified assessment scores, official exam scores, certificates, licenses, sample videos, references, background-check status.
Learner populations	Age, grade, adult learners, international students, multilingual learners, neurodiverse learners, high-achieving students, remedial support.
Location and work model	Country, city, relocation, remote, time zones, travel, on-site radius.
Availability	Weekly hours, start date, schedule windows, seasonal availability.

Filter group	Examples
Employment and compensation	Full-time, part-time, contract, internship, rate/salary expectations, benefits preference.
Language and communication	Languages taught in, proficiency, accent/locale familiarity, parent communication experience.
Profile quality	Completion, recency, responsiveness, verification count, media samples, last active.

7.8 Candidate result cards

- Name, professional headline, location/time zone, open-to-work status, and primary role types.
- Top subject/program expertise and relevant grade/learner segments.
- Years of experience and one or two quantified outcomes when available.
- Verification/evidence indicators: credential, assessment, official score, video, references.
- Work preferences: remote/on-site, engagement type, availability, compensation visibility where permitted.
- Match explanation showing which filters or intent criteria are satisfied.
- Actions: view profile, save, add to pipeline, message, hide, compare.

7.9 Recruiter evaluation and pipeline

Stage	Purpose	Default transition actions
New interest	Unreviewed inbound candidate.	View, assign, archive, reject.
Sourced	Recruiter added candidate from search.	Message, request interest/consent, shortlist.
Reviewing	Profile and evidence under evaluation.	Add notes, request information, share internally.
Contacted	Initial message sent or candidate contacted.	Await response, schedule screening.
Screening	Qualification conversation or task in progress.	Request assessment, upload feedback, advance/reject.
Interview	Formal interview stage.	Record date, interviewer, feedback, next action.
Offer	Offer or engagement terms under discussion.	Mark accepted/declined/withdrawn.
Hired	Successful placement.	Record role and start date; prompt outcome feedback.
Rejected / archived	Not progressing or retained for future.	Reason code, candidate notification, re-open.

7.10 Recruiter profile access and contact rules

- A recruiter must be an active member of a published or verified company to access discoverable candidate profiles.
- Candidate profile access is logged with company, user, timestamp, and source.
- Email and phone are stored in the profile but hidden by default from search results. Candidate can choose: visible to authorized recruiters, visible after interest, or reveal on request.
- In-platform messaging is the default contact channel and should not require exposing direct contact information.

- Downloads of candidate files and exports require explicit permission and are logged.
- If a candidate shares a private profile through interest, access is limited to that company and persists until withdrawn or retention rules apply.

8. Candidate journey

The candidate journey creates a professional educator profile designed to replace fragmented resumes, email attachments, screening forms, and ad hoc teaching samples. The profile builder is modular, Typeform-like, saveable, and role-aware. Every candidate starts from the same core profile and receives dynamic sections based on the education roles selected.

8.1 Candidate journey overview

Phase	Candidate goal	Primary outcome
A. Start profile	Choose to create a candidate profile after account verification.	Draft candidate profile created.
B. Define professional identity	Select target roles, expertise, headline, location, and work preferences.	Search taxonomy and profile summary established.
C. Build evidence	Add experience, education, credentials, scores, outcomes, media, and documents.	Recruiter-ready evidence layer.
D. Configure visibility	Choose discoverability and contact rules.	Private, discoverable, or paused profile.
E. Preview and publish	Review professional rendering and completeness.	Published candidate profile.
F. Discover companies	Browse public companies and hiring intents.	Saved companies and relevant recommendations.
G. Express interest	Share profile with a company or role.	Interest submitted with consent and optional note.
H. Engage	Receive recruiter messages, requests, assessments, or interviews.	Conversation and status management.
I. Maintain profile	Update availability, evidence, and work preferences.	Current, trustworthy profile.

8.2 Candidate information architecture

Screen ID	Screen	Purpose	Primary requirements
CAN-01	Candidate home	Show profile status and opportunities.	Completeness, visibility, profile views where policy allows, new messages, company recommendations, pending actions.
CAN-02	Profile builder	Collect structured candidate data.	Section navigation, progress, save and exit, dynamic questions, validation, preview.
CAN-03	Profile preview	Show recruiter-facing rendering.	Exact visibility preview, section order, private-field indicators, publish controls.
CAN-04	Profile visibility	Control discoverability and	Draft/private/discoverable/paused; contact reveal rules;

Screen ID	Screen	Purpose	Primary requirements
		contact.	company blocks; search visibility.
CAN-05	Company discovery	Browse and filter public organizations.	Search by organization type, programs, location, hiring roles, work model.
CAN-06	Company page	Evaluate company and hiring intent.	Public page; follow/save; express interest; report.
CAN-07	Interest submission	Share profile with company.	Select role intents; optional note; answer up to three questions; consent; submit.
CAN-08	My interests	Track submitted interest.	Company, roles, date, status, messages, withdraw.
CAN-09	Messages	Communicate with companies.	Threads, attachments, safety/reporting, availability prompts.
CAN-10	Assessments	Complete platform or company-requested assessments.	Instructions, attempt state, results visibility, retake policy.
CAN-11	Saved companies	Maintain shortlist.	Notes, hiring changes, notification preferences.
CAN-12	Candidate settings	Control profile and account preferences.	Notifications, data export, blocked companies, privacy, delete/archive.

8.3 Candidate profile builder structure

The builder should be organized into broad sections and one-question or one-concept screens. Candidates may skip optional sections and return later. Completion should be shown by section and by evidence quality, not as one opaque percentage.

Section	Core purpose	Examples
1. Professional identity	Create recruiter-facing introduction.	Name, photo, headline, pronouns optional, location, languages, introduction, role types.
2. Role and work preferences	Define desired opportunities.	Roles, employment type, remote/on-site, schedule, location, start date, compensation.
3. Teaching expertise	Describe what and whom the candidate teaches.	Subjects, tests, grade bands, curricula, learner populations, modality.
4. Experience	Provide structured employment and teaching history.	Organizations, roles, dates, responsibilities, class sizes, learner counts, outcomes.
5. Education	Show qualifications.	Degrees, institutions, fields, dates, honors, transcripts optional.
6. Credentials and checks	Demonstrate eligibility and trust.	Teaching licenses, certificates, safeguarding, background checks, first aid, memberships.
7. Assessments and scores	Demonstrate subject competence.	Official scores, score reports, Evallo assessments, score visibility.
8. Teaching practice	Explain methodology and judgment.	Philosophy, lesson planning, differentiation, assessment, technology, parent communication.

Section	Core purpose	Examples
9. Outcomes and impact	Show results.	Score gains, pass rates, student growth, retention, projects, publications, testimonials.
10. Portfolio and media	Show work directly.	Unlimited approved video embeds, sample lessons, documents, presentations, articles, syllabi.
11. References	Enable validation.	Professional references, relationship, organization, contact permissions, recommendation letters.
12. Contact and visibility	Control access.	Email/phone, preferred contact, recruiter visibility, blocked organizations, profile status.

8.4 Candidate role taxonomy

Role family	Representative roles
Private and supplemental instruction	Private tutor, test-prep tutor, academic coach, homework support specialist, enrichment instructor, homeschool educator.
School teaching	Early childhood educator, primary teacher, middle-school teacher, high-school teacher, special-education teacher, substitute teacher, teaching assistant.
Higher education	Professor, lecturer, adjunct faculty, teaching fellow, lab instructor, clinical instructor, research supervisor.
Counseling and student support	College admissions counselor, school counselor, career counselor, academic advisor, student-success coach, international admissions advisor.
Curriculum and content	Curriculum designer, instructional designer, assessment writer, education content writer, subject-matter expert, course creator.
Leadership and operations	Academic coordinator, department head, program manager, principal/school leader, tutoring-center manager, director of studies.
Language and specialist education	Language instructor, ESL/EFL teacher, speech/debate coach, arts/music instructor, STEM/lab instructor, learning-support specialist.
Training and consulting	Teacher trainer, professional-development facilitator, education consultant, corporate learning facilitator, implementation specialist.

8.5 Candidate core profile requirements

Category	Required for publication	Optional / evidence-enhancing
Identity	Full name; professional headline; country/region; at least one target role.	Photo, pronouns, personal website, portfolio link.
Expertise	At least one subject/program domain and one learner segment.	Additional subjects, curricula, special populations, tools.
Experience	At least one experience entry or explicit “new educator” declaration with supporting education/training.	Quantified outcomes, class size, learner count, leadership, references.
Education	Highest qualification or in-progress education.	Transcripts, honors, coursework.

Category	Required for publication	Optional / evidence-enhancing
Work preference	Engagement type, delivery mode, availability, location/time-zone preference.	Compensation, travel, relocation, benefits preferences.
Introduction	Short professional summary.	Long-form teaching philosophy, personal story, career goals.
Visibility	Profile status and contact rule.	Blocked companies, profile expiration reminder.
Evidence	No evidence item required for initial publication, but completion warnings apply.	Credentials, scores, assessments, videos, documents, references.

8.6 Candidate media and evidence

- Allow an unlimited logical number of video links, subject to fair-use limits, moderation, and provider allow-list. MVP supports YouTube and other approved embeddable providers rather than native hosting.
- Each video includes title, type, subject, learner level, duration, description, date, language, visibility, and optional prompt answered.
- Support sample types: introduction, full lesson, short concept explanation, classroom clip with permissions, counseling scenario, curriculum walkthrough, lecture sample, lab demonstration, parent communication example, technology demonstration.
- Documents may include resume, cover letter, score report, license, certificate, transcript, syllabus, lesson plan, worksheet, publication, research paper, portfolio, recommendation letter, and teaching evaluation.
- Sensitive documents require visibility controls, download restrictions, watermarking consideration, and access logging.
- Each evidence item may be self-declared, document-supported, platform-verified, issuer-verified, or expired. Recruiters must see verification status clearly.

8.7 Candidate expression of interest

Step	Behavior
1. Initiate	Candidate clicks “I’m interested” on company page or selected hiring intent.
2. Authenticate	Anonymous visitor signs in or creates an account; return path is preserved.
3. Profile check	If no candidate profile exists, begin minimum publish flow. If incomplete for company criteria, show required gaps.
4. Select fit	Candidate chooses one or more active role intents or “general interest.”
5. Optional context	Candidate may add a short message and answer up to three company questions.
6. Consent	Candidate sees exactly which profile sections and contact details the company will access.
7. Submit	Create interest record, grant profile access, notify company, and show confirmation.
8. Track	Candidate sees status, messages, and withdraw option in My Interests.

8.8 Candidate profile professional rendering

The recruiter-facing profile should read as a curated professional dossier rather than a long form. It uses a summary header, sticky section navigation, evidence badges, collapsible detail, and recruiter actions. The candidate preview must show the exact same rendering and privacy state.

Profile block	Displayed information
Header	Photo, name, headline, location/time zone, languages, open-to-work status, role types, primary expertise, years of experience, response indicator.
Top evidence	Verified credentials, assessment scores, official scores, reference count, media count, background-check status where applicable.
Introduction	Short summary, longer bio, teaching philosophy excerpt, target opportunities.
Expertise	Subjects, tests, disciplines, curricula, grade/learner levels, environments, specialist populations.
Experience timeline	Organization, role, dates, delivery model, responsibilities, quantified scale and outcomes, evidence links.
Education and credentials	Degrees, licenses, certificates, professional development, memberships, expiry/verification status.
Teaching practice	Methodology, planning, differentiation, assessment, technology, communication, safeguarding.
Outcomes	Score improvement, pass rate, learner growth, projects, publications, testimonials, supervisor evaluations.
Portfolio	Embedded videos and documents grouped by type and subject.
Work preferences	Employment type, availability, modality, location, time zones, travel, compensation visibility.
Contact	In-platform message plus direct details according to candidate setting.

9. Public company discovery and anonymous visitor journey

9.1 Public discovery requirements

- Published company pages must load without authentication and have stable, human-readable URLs.
- Company directory pages may be public and searchable by organization type, location, programs, and active hiring roles.
- Candidate profiles, search results, candidate names, and candidate evidence must never be exposed to anonymous visitors or search engines.
- Public pages include sign-in and create-account actions but should not interrupt passive browsing.
- The “I’m interested” CTA is available publicly; anonymous users are routed through authentication and returned to the exact company/role.

9.2 Anonymous-to-interest flow

- Visitor lands on company page from Google, social link, direct URL, or directory.
- Visitor reviews company information and active hiring categories.
- Visitor selects “I’m interested” for a role or general interest.
- Platform stores intended company, role, campaign source, and return path in a secure short-lived state.
- Visitor signs in or creates an account and verifies email.

14. If candidate profile does not exist, platform starts minimum candidate-profile flow; detailed completion can continue afterward.
15. Candidate reviews share/consent summary and submits interest.
16. Company receives candidate in interest inbox; candidate sees confirmation and status.

9.3 Company page states

State	Public behavior	CTA
Draft	Not publicly accessible except preview token.	None.
Published, not hiring	Company page visible and indexable.	Follow/save company; optional “Share profile for future opportunities.”
Published, currently hiring	Company page visible with active role intents.	“I’m interested” and role-specific actions.
Hiring paused	Page remains visible; hiring section shows paused state.	Follow for updates; no new interest unless company permits general interest.
Archived company	No new activity; redirect or preservation policy applies.	None; historical notice if page retained.
Moderation restricted	Public access removed or limited.	Support/report guidance.

10. Search, matching, and recommendations

10.1 Search architecture

Search uses structured profile fields as the source of truth and full-text search as a supplement. Filters should be composable, understandable, and auditable. Ranking may use relevance signals but must not obscure why a candidate appears.

Search component	Requirement
Keyword search	Search headline, summary, experience, institutions, subjects, credentials, and portfolio metadata; do not search hidden/private fields.
Structured facets	Role, subject, level, curriculum, experience, location, modality, availability, evidence, language, and compensation.
Boolean behavior	Within a facet, support OR by default and explicit match-all where useful; between facets, use AND.
Saved searches	Name query; store filters and sort; optional alerts; company-scoped.
Result explanation	Show matched criteria and important gaps; never imply objective quality ranking.
Freshness	Use last active, last profile update, availability confirmation, and response behavior as transparent secondary signals.
Privacy enforcement	Filter candidates before ranking based on profile state, company blocks, geography constraints, and explicit shares.
Performance	Return first result page quickly with asynchronous facet counts if necessary.

10.2 Matching inputs

Company-side input	Candidate-side input	Use
Role category	Target roles	Hard/soft match.
Subject/program	Expertise and evidence	Relevance and filter.
Learner level	Experience by learner segment	Relevance and warning.
Work model/location	Remote/on-site, location, time zone, relocation	Eligibility.
Employment type	Desired engagement	Eligibility/preference.
Schedule/start	Availability	Eligibility.
Experience level	Years, scale, leadership	Relevance.
Credentials/scores	Credential and assessment evidence	Eligibility and evidence.
Language	Teaching languages	Eligibility/preference.
Compensation	Candidate expectation visibility	Compatibility when both sides provide.

10.3 Recommendation safeguards

- Do not use protected attributes or infer them for ranking.
- Do not rank based on profile photo presence or demographic proxies.
- Separate “matches stated criteria” from “recommended” and show explanations.
- Allow candidates to opt out of recommendations while remaining visible through direct share.
- Allow recruiters to hide or provide feedback on irrelevant results without creating hidden discriminatory rules.
- Audit ranking changes and test for systematic exclusion across regions, career stages, and profile formats.

11. Interest, messaging, shortlist, and pipeline workflows

11.1 Interest record

Attribute	Definition
Source	Company public page, directory, recruiter invitation, campaign link, or re-engagement.
Scope	General company interest or one/more hiring intents.
Candidate snapshot	Profile version and visibility state at submission; current profile remains accessible subject to permissions.
Message	Optional candidate note and answers to lightweight questions.
Consent	Company access grant, contact-visibility choice, and terms timestamp.
Status	Submitted, viewed, contacted, progressed, closed, withdrawn, expired.
Ownership	Company recruiter owner and pipeline relation.

Attribute	Definition
Audit	Submission, profile views, messages, stage changes, and withdrawal.

11.2 Messaging

- Messaging is company-to-candidate and candidate-to-company; internal company notes are separate and never visible to candidates.
- A recruiter may start a conversation from interest, search, shortlist, or pipeline. If the candidate is only discoverable but has not shown interest, the first message must clearly identify the company and role context.
- Candidates can accept, decline, mute, report, or block a company conversation.
- Attachments are scanned and limited by type/size. Sensitive documents should be requested through structured evidence workflows where possible.
- Email notifications may include message previews only according to privacy preference; secure links open the in-platform thread.
- Message templates, scheduling links, and automated follow-ups are post-MVP unless needed by a pilot partner.

11.3 Shortlist and compare

- Recruiters can save a candidate to a private company shortlist without moving them into an active hiring stage.
- Shortlist entries support tags, role-intent association, owner, and short note.
- Candidate compare view should show only comparable structured fields and evidence; avoid reducing nuanced profiles to one score.
- Candidates are not notified when simply saved unless company initiates contact or the candidate has expressed interest.

11.4 Rejection and closure

- Recruiter selects a reason code and optional internal note; candidate-facing message can be standard or customized.
- Candidate may be rejected for one hiring intent but retained for another or future interest.
- Withdrawal by candidate immediately prevents new recruiter actions except required retention/audit access; existing messages remain subject to policy.
- Closed or archived role intents preserve historical pipeline records and analytics.

12. Candidate profile schema and question framework

This section defines the breadth required for educator profiles. The builder should not show every question to every candidate. It uses role selection and prior answers to reveal relevant modules. The profile stores structured answers so recruiters can filter and compare, while rendering the result as a coherent professional narrative.

12.1 Core personal and professional questions

Area	Question coverage
Identity	What is your full professional name?; What name should recruiters use?; Where are you based?; Which time zone do you work in?; Which languages can you teach or communicate in?

Area	Question coverage
Headline and introduction	What is your professional headline?; Write a 2–4 sentence introduction; What makes your approach distinctive?; What opportunities are you seeking?
Role intent	Which education roles are you open to?; Which role is primary?; Are you seeking teaching, counseling, content, leadership, or mixed roles?
Employment preferences	Full-time, part-time, contract, freelance, internship, seasonal, substitute, volunteer; desired weekly hours; earliest start date; notice period.
Work model	Remote, on-site, hybrid; willing to travel; relocation; countries/regions; time-zone overlap; preferred schedule windows.
Compensation	Hourly, monthly, annual, per-course, per-project expectations; minimum/target; negotiable; visibility to recruiters.
Work authorization	Countries where authorized; sponsorship requirement; documentation visibility; relocation eligibility.
Contact	Preferred channel; email; phone; messaging preference; direct-contact visibility; best response times.

12.2 Teaching expertise questions

Area	Detailed questions
Subject/program	What subjects, tests, disciplines, or counseling areas do you teach?; Rank expertise; years per subject; highest level taught; evidence for each.
Learner level	Early childhood; primary; middle; high school; undergraduate; graduate; adult; professional; parent/family education.
Curriculum	Which curricula, boards, standards, textbooks, platforms, and exam specifications have you used?; Dates and depth.
Teaching format	One-to-one; small group; classroom; lecture; lab; workshop; asynchronous; cohort; office hours; field instruction.
Learner populations	Multilingual learners; international students; neurodiverse learners; gifted learners; remedial support; first-generation students; adult returners.
Class scale	Typical and maximum class size; number of learners taught; caseload size for counseling; advisee count.
Learning needs	Experience with accommodations, IEP/504-style plans, accessibility, learning differences, exam accommodations, safeguarding constraints.
Technology	LMS, video platforms, digital whiteboards, assessment tools, classroom response tools, AI tools, accessibility tools, content-authoring tools.

12.3 Experience-entry questions

- Organization, role title, employment type, location, delivery mode, start/end dates, current role, supervisor/reference relationship.
- Role summary, core responsibilities, subjects/programs, learner levels, weekly teaching load, class/caseload size, curriculum ownership, team size.

- Teaching and assessment methods used; platforms and tools; parent/family communication; collaboration with teachers, counselors, or administrators.
- Outcomes: score gains, pass rates, grade growth, retention, attendance, placement/admission outcomes, completion rates, learner satisfaction, publication/research impact.
- Evidence: evaluation, testimonial, report, sample, course page, publication, reference, certificate, or supervisor verification.
- Reason for leaving optional and private; rehire eligibility optional; gap explanation optional and candidate-controlled.

12.4 Education and qualifications questions

- Degree or qualification type, institution, field/major, concentration, location, start/end, completed/in progress, grade/GPA visibility, honors.
- Relevant coursework, thesis/dissertation, teaching practicum, assistantships, research areas, publications, laboratory or clinical training.
- Teaching licenses: jurisdiction, subject/level endorsement, license number private by default, issue/expiry, status, verification document.
- Certificates: issuer, title, credential ID, issue/expiry, topics, evidence link/document.
- Professional development: workshops, continuing education hours, conferences, training providers, dates, outcomes.
- Memberships and affiliations: professional bodies, subject associations, accreditation groups, educator networks.

12.5 Teaching-practice question bank

Practice area	Question bank
Planning	How do you diagnose starting level?; How do you set objectives?; Describe lesson structure; How do you adapt pacing?; What preparation do you expect from learners?
Instruction	How do you explain difficult concepts?; How do you use questioning?; How do you balance direct instruction and discovery?; How do you check understanding in real time?
Differentiation	How do you support learners at different levels?; What accommodations have you used?; How do you extend high-performing learners?
Assessment	How do you design formative and summative assessment?; How do you use data?; How do you provide feedback?; How do you handle retakes and mastery?
Engagement	How do you motivate reluctant learners?; Build rapport?; Handle attendance or incomplete work?; Create psychologically safe participation?
Communication	How do you communicate with parents, guardians, schools, faculty, or leadership?; How often?; How do you document progress?
Classroom/caseload management	How do you set norms?; Handle disruption?; Manage large groups?; Prioritize a counseling caseload?; Escalate safeguarding concerns?
Technology and AI	Which tools do you use and why?; How do you protect data?; What is your policy on learner AI use?; How do you ensure accessibility?
Reflection	How do you evaluate your own teaching?; What feedback changed your practice?; Describe a lesson or intervention that failed and what you changed.
Ethics and safeguarding	How do you maintain boundaries?; Handle confidentiality?; Respond to suspected harm?; Maintain academic integrity?

12.6 Role-specific dynamic question banks

Private tutor / test-prep tutor

- Which tests and sections do you teach, and which current formats are you familiar with?
- What official or platform-verified scores can you provide?
- Describe your diagnostic process and how you build an individualized study plan.
- What average or representative score gains have learners achieved, over what duration and starting range?
- How do you assign, review, and track independent work?
- How do you communicate progress to parents or students?
- What is your cancellation, rescheduling, and homework-accountability approach?
- Upload or embed a concept-explanation video and a sample score-report walkthrough.

School teacher

- Which grades, subjects, standards, and school systems have you taught?
- What class sizes and timetable load have you managed?
- Describe unit planning, lesson planning, assessment, grading, and reporting responsibilities.
- Which student-information, LMS, and classroom tools have you used?
- Describe experience with IEPs, accommodations, safeguarding, parent conferences, and multidisciplinary teams.
- What extracurricular, pastoral, advisory, or homeroom responsibilities have you held?
- Provide sample lesson/unit plan, classroom teaching video where permitted, and recent evaluation.

Professor / lecturer / adjunct

- Which disciplines and course levels can you teach?
- Which courses have you independently designed or coordinated?
- What lecture, seminar, lab, studio, supervision, and office-hour experience do you have?
- Describe assessment design, moderation, grading scale, academic-integrity practice, and accessibility.
- List research areas, publications, grants, conferences, and industry experience relevant to teaching.
- Describe student-supervision experience: capstone, thesis, dissertation, research assistantship.
- Embed lecture sample and upload syllabus, teaching evaluations, and publication list.

College admissions counselor

- Which countries, admissions systems, institution types, and application platforms do you advise on?
- How many students or families have you managed per cycle?
- Describe school-list strategy, application planning, essay support boundaries, financial-aid guidance, and decision support.
- What admissions outcomes can you report responsibly without implying guarantees?
- How do you maintain ethical standards, confidentiality, and student authorship?
- What experience do you have with international applicants, visas, scholarships, athletics, arts portfolios, or transfer admissions?
- Upload an anonymized planning template or recorded counseling explanation.

School / academic / career counselor

- What counseling or advising populations and caseload sizes have you supported?
- Which licenses or certifications apply to your role and jurisdiction?
- Describe academic planning, career exploration, attendance, transition, crisis-escalation, and referral practices relevant to the role.
- How do you document interactions and protect confidentiality?
- How do you collaborate with families, teachers, administrators, and external services?

- Which assessments, interest inventories, or planning tools do you use?
- Provide sample workshop, guidance resource, or anonymized intervention plan.

Special education / learning support

- Which learning differences, disability categories, and support settings have you worked with?
- Which licenses, endorsements, and evidence-based interventions do you hold or use?
- Describe experience developing, implementing, and reviewing individualized plans and accommodations.
- How do you collect progress-monitoring data and collaborate with families and multidisciplinary teams?
- What assistive technologies and accessibility practices do you use?
- Describe behavior-support, communication, sensory, or executive-function strategies within your scope.
- Upload an anonymized lesson, progress-monitoring sample, or accessibility adaptation.

Curriculum / instructional designer

- Which subject areas, learner populations, modalities, and authoring tools do you design for?
- Describe your needs analysis, learning-objective, assessment, storyboarding, and evaluation process.
- Which frameworks or standards do you use?
- What LMS, authoring, media, accessibility, and analytics tools have you used?
- What scale of curriculum, course, or content library have you owned?
- How do you work with subject-matter experts and review cycles?
- Provide portfolio links, sample storyboard, course map, rubric, or evaluation results.

Academic coach / student-success coach

- Which coaching areas do you cover: executive function, study skills, time management, motivation, transition, accountability?
- Describe goal setting, session structure, action planning, and progress tracking.
- How do you distinguish coaching from tutoring, counseling, or clinical services?
- What age groups and learner profiles have you supported?
- How do you communicate with families or institutions while preserving student agency?
- Which tools, trackers, or assessments do you use?
- Provide a sample coaching plan or recorded explanation of your method.

Education administrator / academic leader

- Which institutions, programs, teams, budgets, and learner populations have you led?
- Describe hiring, observation, professional development, quality assurance, curriculum, scheduling, or compliance responsibilities.
- What operational and academic metrics have you owned?
- Describe a change initiative, turnaround, launch, or accreditation effort you led.
- How do you coach educators and handle performance concerns?
- Which SIS, CRM, LMS, scheduling, finance, and reporting systems have you used?
- Provide strategic plan, dashboard, policy, or presentation samples where appropriate.

Language instructor / ESL-EFL

- Which languages do you teach and at what proficiency levels?
- Which frameworks and exams do you know: CEFR, IELTS, TOEFL, Cambridge, heritage language, business language?
- Describe your balance of speaking, listening, reading, writing, grammar, pronunciation, and culture.
- Which learner first languages and age groups have you worked with?
- How do you assess level and progress?
- What immersion, bilingual, communicative, or content-based methods do you use?
- Embed a teaching sample and provide a lesson plan or assessment sample.

Teaching assistant / early-career educator

- Which subjects, age groups, and settings have you supported?
- Describe supervised teaching, practicum, tutoring, mentoring, camp, volunteer, or peer-instruction experience.
- Which responsibilities can you perform independently and which require supervision?
- What training, safeguarding, first aid, or classroom-management preparation have you completed?
- Provide mentor/supervisor references and sample micro-teaching video.
- What development and feedback are you seeking from an employer?

Education content / assessment writer

- Which subjects, grade bands, tests, standards, and item types do you write?
- Describe item-development, review, bias/sensitivity, difficulty calibration, and answer-explanation experience.
- Which content-management, authoring, equation, diagram, and collaboration tools do you use?
- What volume and deadlines have you managed?
- Do you have psychometric, accessibility, or localization experience?
- Provide writing samples, item sets, explanations, or published content subject to rights.

Lab / practical / arts / performance instructor

- Which facilities, instruments, software, equipment, techniques, or repertoire can you teach?
- Which safety procedures, certifications, and risk-management practices apply?
- Describe demonstration, practice supervision, critique, performance, and assessment methods.
- What group sizes and skill levels have you handled?
- Provide demonstration video, portfolio, performance sample, or practical rubric.

12.7 Candidate video prompt library

Prompt type	Example prompts
Introduction	Introduce yourself, your teaching context, and the learners you help best in 60–120 seconds.
Concept explanation	Teach a difficult concept from your field as if addressing a learner at a specified level.
Misconception response	A learner gives a common wrong answer. Explain how you diagnose and respond.
Lesson planning	Walk through how you would plan a lesson or counseling session from objective to assessment.
Differentiation	Explain how you would adapt the same objective for three different learner profiles.
Feedback	Demonstrate how you would give constructive feedback on a sample learner response.
Parent/stakeholder communication	Explain a difficult progress update with clarity, empathy, and next steps.
Role scenario	Respond to a realistic scenario tailored to tutor, teacher, professor, counselor, leader, or designer.
Portfolio walkthrough	Explain one artifact, the problem it solved, your contribution, and evidence of effectiveness.

13. Company profile schema

Section	Structured fields
Identity	Name, legal name optional, slug, logo, cover image, organization type, website, verified domains,

Section	Structured fields
	founding year, size.
Location	Headquarters, locations, service regions, time zones, remote/hybrid/on-site model.
Education services	Tutoring, schools, colleges, test prep, counseling, curriculum, edtech, training, specialist education; subjects and programs.
Learners	Age/grade bands, countries, curricula, institution types, special populations, delivery modes.
About	Tagline, summary, full description, mission, values, culture, teaching philosophy, differentiators.
Trust	Verification status, accreditation, memberships, awards, testimonials, public references.
Team	Public members, leadership, recruiter contacts where opted in.
Hiring	Currently hiring state, general interest setting, role intents, locations, employment types, start timing, compensation visibility.
Media	Images, videos, office/classroom media, program collateral, external links.
SEO	Page title, meta description, canonical slug, structured organization data, social preview.

14. Data model and system states

14.1 Core relational model

Object	Key relationships
User	Has one personal profile; may have one candidate profile; has many company memberships; has account settings and sessions.
CandidateProfile	Belongs to user; has many experiences, education entries, credentials, assessments, media, documents, references, role preferences, visibility grants, interests.
Company	Has many memberships, locations, programs, hiring intents, interests, pipelines, saved searches, messages, and public-page revisions.
CompanyMembership	Belongs to user and company; role; status; invitation; permissions; public-team visibility.
HiringIntent	Belongs to company; role taxonomy; specializations; work model; status; optional description; candidate interests.
Interest	Belongs to candidate and company; may relate to hiring intents; consent and access grant; status; message/pipeline relation.
PipelineEntry	Belongs to company and candidate; stage, owner, sources, role tags, notes, tasks, status history.
Conversation	Company-candidate thread; participants derived from membership and candidate user; attachments and moderation.
EvidenceItem	Belongs to candidate; type, issuer/provider, metadata, file/link, visibility, verification, expiry.
SearchDefinition	Belongs to company/user; filter JSON, sort, alert preference, last run.

14.2 Important state machines

Object	States
User	Pending verification → active → suspended → deletion pending → deleted/anonymized.
Candidate profile	Draft → private/discoverable → paused → archived; moderation-restricted can overlay.
Company	Draft → published → paused → archived; verification state is separate.
Hiring intent	Draft → active → paused → closed → archived.
Interest	Draft → submitted → viewed/contacted/progressed → closed; candidate may withdraw.
Membership	Invited → active → suspended/removed; invitation expired/revoked.
Evidence verification	Unverified → pending → verified/rejected → expired.

14.3 Audit events

- Account verification, sign-in method changes, password changes, security events, deletion request.
- Candidate visibility changes, company access grants, contact-detail reveal, evidence downloads, profile exports.
- Company creation, publication, verification, ownership transfer, member invitation/role changes.
- Search execution and saved-search alerts at aggregate level; candidate profile views and actions at identifiable level where required.
- Interest submission/withdrawal, message send, stage changes, notes, rejection, offer, hired outcome.
- Moderation reports, content removals, appeals, and support overrides.

15. Notifications and communications

Audience	Event	Channels / controls
User	Verification, password reset, new login, security change.	Email required; in-app where applicable; security notices cannot be fully disabled.
Candidate	Interest submitted/viewed, recruiter message, profile-access request, assessment request, status change, hiring update from saved company.	Email + in-app; granular preferences; avoid exposing sensitive details in email.
Recruiter	New interest, candidate response, saved-search match, assignment, pipeline task, company-page issue.	Email + in-app; company-scoped preferences and digests.
Company owner/admin	Invitation accepted, role changed, verification request, moderation issue, ownership/security event.	Email + in-app.
Anonymous visitor	None until consent/account creation.	No tracking-based email without explicit opt-in.

15.1 Notification rules

- Every notification links to the exact relevant company, candidate, message, interest, or task after authentication.

- Company-scoped notifications identify the company context for multi-company recruiters.
- Digest frequency supports immediate, daily, weekly, and off where safe.
- Saved-search alerts must not expose candidate private data in subject lines or unauthenticated email content.
- Candidate rejection/closure notifications should be respectful, configurable, and never disclose internal notes.

16. Privacy, trust, moderation, and security

16.1 Privacy principles

- Candidate data is private by default until the candidate publishes or explicitly shares a profile.
- Public company information and private recruiter/candidate information are stored and served through distinct authorization paths.
- Candidates can see and change who may discover them, what contact details are visible, and which companies are blocked.
- Recruiters access candidate data only through an active company membership and a documented business purpose.
- Profile views, evidence access, exports, and contact reveals are auditable.
- Deletion, export, correction, consent withdrawal, and retention workflows must be designed from the start.

16.2 Trust and verification

Verification	Method	Display
Email	Verification link.	Verified email indicator; address not public.
Company domain	DNS/email-domain proof or approved document.	Verified company-domain badge.
Identity	Optional identity provider or support review post-MVP.	Identity-verified badge only when completed.
Credential	Issuer link, document review, registry/API, or support review.	Verified / document provided / self-declared / expired.
Assessment	Completed within Evallo under defined attempt rules.	Platform-assessed score with date and conditions.
Official score	Uploaded report plus optional manual/provider verification.	Report provided / verified; candidate controls exact score visibility.
Reference	Reference confirms via unique link or support process.	Confirmed reference count and relationship.
Background check	Third-party status only; do not store unnecessary report detail.	Status, jurisdiction, date, expiry; candidate consent required.

16.3 Moderation and safety

- Report company, candidate profile, message, evidence, impersonation, discrimination, spam, or unsafe conduct.
- Automated file scanning and URL safety checks; provider allow-list for embeds.
- Company-page claims, testimonials, credentials, and outcome statistics may be reviewed or labeled as self-reported.
- Messaging rate limits and anti-spam rules, especially for unsolicited recruiter outreach.

- Block controls for candidates and companies; blocked parties cannot message or discover the blocker where feasible.
- Escalation workflow for safeguarding concerns, fraud, credential falsification, harassment, and privacy violations.
- Appeals and support-audit trail for moderation actions.

16.4 Security requirements

- Secure password storage, verification/reset token expiry, session invalidation, rate limiting, brute-force protection, and suspicious-login monitoring.
- Role-based and object-level authorization on every company, candidate, evidence, message, and pipeline action.
- Encryption in transit and at rest; secrets management; secure file storage with time-limited access URLs.
- Optional multi-factor authentication initially; mandatory MFA capability for company owners/admins in later phase.
- Audit logging, least-privilege internal access, support impersonation controls, and data-access monitoring.
- Dependency and file scanning, secure development lifecycle, vulnerability response, backup and restore testing.

17. SEO and public-page requirements

Requirement	Specification
Indexability	Published company pages and approved directory pages are indexable. Candidate and authenticated application routes use noindex and authorization.
URL	Stable slug, canonical URL, redirect history after slug change, duplicate-company handling.
Metadata	Company-specific title, description, image, canonical, social preview; sensible defaults generated from structured fields.
Structured data	Organization and related public structured data when valid; job structured data only for sufficiently detailed formal job listings, not generic hiring intent.
Content rendering	Critical company content server-rendered or reliably pre-rendered for crawlers and sharing previews.
Sitemap	Include published companies and public directories; remove archived/restricted pages promptly.
Robots/privacy	Block candidate routes, search, message, pipeline, and account surfaces from indexing.
Performance	Public pages optimized for fast load, image compression, semantic markup, accessibility, and Core Web Vitals-like performance goals.

18. Analytics and reporting

18.1 Platform event taxonomy

Area	Key events
Acquisition	Public page viewed; directory search; signup started; SSO selected; verification sent/opened/completed.
Onboarding	Password created; personal setup completed; first-action selected; candidate/company setup

Area	Key events
	started/completed.
Company	Company created/published/verified; hiring toggled; intent created; public CTA clicked; team invited.
Candidate	Profile section completed; evidence added; visibility changed; profile published; company saved; interest submitted/withdrawn.
Recruiting	Search run; filter used; result viewed; candidate saved; message sent; pipeline stage changed; outcome recorded.
Marketplace	Interest viewed; response time; conversation started; screening/interview/offer/hire outcome.
Trust	Report submitted; evidence verified/rejected; company verified; block action; moderation resolution.

18.2 Company analytics

- Public page views, unique visitors, source categories, hiring CTA clicks, interest submissions, conversion rate.
- Interests by role intent, location, source, and time; response time and stage conversion.
- Talent-search usage, saved searches, candidate views, shortlist/message/pipeline conversion.
- Hiring-intent performance and candidate outcome distribution.
- Team activity and pending candidate follow-ups.

18.3 Candidate analytics

- Profile completeness by section and evidence type.
- Profile visibility status and last confirmation date.
- Profile views and search appearances only if privacy policy permits and avoids revealing sensitive recruiter behavior.
- Interest statuses, response time, message activity, assessment requests, and saved companies.
- Recommendations to improve discoverability based on missing structured data, not opaque scoring.

19. Non-functional requirements

Area	Requirement
Responsive web	Desktop-first application with full functionality on common laptop widths; public company pages responsive to mobile. No mobile-app assumption.
Accessibility	Keyboard navigation, visible focus, semantic labels, sufficient contrast, screen-reader support, error association, captions/transcripts for media where provided.
Performance	Fast public-page rendering; paginated/virtualized search results; asynchronous media; avoid blocking onboarding on optional enrichment.
Reliability	Idempotent interest submission, invitation acceptance, and verification; recoverable drafts; transactional audit events.
Scalability	Search index and evidence metadata designed for increasing profile volume; separate public-company and private-candidate workloads.
Internationalization	Unicode names, global locations, time zones, multiple currencies and compensation periods, localized date/phone formats, multilingual profile fields later.
Data portability	Candidate export; company export; deletion workflows; structured evidence metadata retained

Area	Requirement
	according to policy.
Observability	Application logs, authorization failures, search latency, notification delivery, upload failures, moderation events, and funnel analytics.
Browser support	Current stable major desktop browsers; graceful degradation for older unsupported versions.

19.1 Visual and interaction system

- Primary color #0671E0; primary text #0A0A0B; white surfaces; restrained light-gray borders and pale-blue information states.
- Minimalist desktop-web composition with generous white space, no decorative illustrations in core workflows, and one principal task per onboarding page.
- Material-style floating labels: inactive empty field displays label as placeholder; focused or populated field moves label to the top-left border cutout.
- Primary actions are full-width or clearly dominant within focused forms; secondary actions are text or outline buttons.
- Progress bars and “Step X of Y” are used for finite wizards. Long profile builders also show section navigation and save state.
- Validation appears inline without causing layout jumps; errors are specific and accessible.

20. MVP, phased roadmap, and dependencies

20.1 MVP scope

MVP area	Included
Authentication	Email verification, password creation, Google/Microsoft sign-in, reset, basic personal setup.
Candidate profile	Core structured profile, dynamic role questions for priority roles, documents/links, YouTube embeds, visibility controls, preview/publish.
Company	Creation, public profile, team membership roles, currently hiring toggle, lightweight role intents, public page.
Discovery	Public company directory/search; authenticated candidate search with core filters and pagination.
Interest	Company/role interest CTA, auth return, profile access grant, interest inbox, candidate tracking.
Recruiting workflow	Candidate view, shortlist, in-platform messages, internal notes, default pipeline stages, basic assignments.
Trust	Email verification, company-domain verification path, evidence verification labels, report/block, audit events.
Notifications	Essential email and in-app events.
Analytics	Core funnel and marketplace events; basic company activity summaries.

20.2 Suggested pilot priority roles

To avoid an unbounded dynamic-profile implementation, the MVP should fully optimize the role-specific experience for a small group that reflects pilot demand, while supporting generic modules for all other roles.

- Private tutor and test-prep tutor.
- School teacher and teaching assistant.
- College admissions / academic counselor.
- Professor / lecturer / adjunct.
- Curriculum or education-content specialist.

20.3 Phase 2

- Saved-search alerts and candidate recommendations.
- Expanded platform assessments and company-requested tasks.
- Reference collection and credential issuer verification.
- Formal job postings with richer requisition workflow, if pilots demonstrate need.
- Interview scheduling, scorecards, templates, tasks, calendar integrations.
- Native profile comparison, talent pools, bulk pipeline operations, exports.
- Public company-following and candidate alerts for new hiring intents.
- Company analytics dashboards and recruiter response benchmarks.

20.4 Later / optional

- Native video recording/hosting and asynchronous video interviews.
- HRIS/ATS, calendar, email, background-check, and identity-verification integrations.

- Offer and contract workflows, onboarding handoff, payroll/timesheet connections.
- Advanced semantic matching and explainable recommendations.
- API access and white-label enterprise talent portals.
- Candidate endorsements, verified placements, and long-term professional reputation graph.

20.5 Dependencies and implementation decisions

Dependency	Decision needed
Authentication provider	Build vs managed authentication; SSO linking; email deliverability and token handling.
Search	Database filtering vs dedicated search index; taxonomy and facet performance.
File/media	Storage, scanning, embed provider policy, preview generation, access URLs, retention.
Taxonomy	Canonical roles, subjects, tests, curricula, grade bands, learner populations, credentials, locations.
Verification	Manual operations process and future providers/APIs.
Messaging	In-app architecture, notifications, abuse protection, attachment policy.
SEO rendering	Server-side rendering or equivalent for public company pages.
Moderation	Operational queue, support permissions, reports, appeals, escalation.
Privacy/legal	Terms, candidate consent, company recruiter obligations, retention and regional requirements.

21. Acceptance criteria and QA scenarios

21.1 Authentication acceptance criteria

- A new user can submit an email, receive a verification link, set a password only after valid verification, provide a name, and reach the workspace.
- The sign-up page does not ask candidate/recruiter role, company information, detailed profile information, or password.
- An SSO user cannot accidentally create a duplicate account for an existing verified email.
- An expired verification link offers a working resend path and preserves the original intended destination.
- The global sign-in page routes the same account into all personal and company contexts.

21.2 Company and public-page acceptance criteria

- A user can create a company, publish a valid public page, and later invite recruiters.
- A published page is accessible without login; a draft page is not publicly accessible.
- A company can mark itself hiring and select role categories without entering a detailed job description.
- Active hiring roles display clear interest actions; paused/closed roles do not accept new role-specific interest.
- Company page metadata, canonical URL, and public content render correctly for search and sharing previews.
- Candidate data never appears in public company HTML, public APIs, sitemaps, or unauthenticated responses.

21.3 Candidate profile acceptance criteria

- A user can create, save, exit, resume, preview, and publish a candidate profile.
- The profile builder dynamically shows role-relevant questions while retaining a common core.
- Candidates can add multiple experience, education, credential, score, document, reference, and video entries.
- The recruiter-facing profile is professionally rendered and contains only fields allowed by visibility settings.

- A private candidate can share a profile with a specific company through interest without becoming globally discoverable.
- A paused profile disappears from new search results but remains available to previously authorized companies according to policy.

21.4 Recruiter search and workflow acceptance criteria

- Only active company members with candidate-view permission can use talent search and open candidate profiles.
- Search filters produce reproducible results and show why candidates match.
- Company blocks, candidate visibility, and geography/access rules are enforced before result display.
- Recruiter can save, message, add to pipeline, assign, add internal notes, and change stage with audit history.
- Internal notes never appear to candidates.
- A candidate can block/report a company and prevent further messages subject to safety and record-retention rules.

21.5 Interest-flow acceptance criteria

- An anonymous visitor can click interest, authenticate, complete the minimum candidate profile, and return to submit without losing company/role context.
- Candidate reviews profile-access and contact-sharing consent before submission.
- Company receives interest exactly once even if the user retries or refreshes.
- Candidate can view status and withdraw interest; recruiter sees withdrawal and cannot continue new outreach.
- Interest to a closed intent is prevented with an informative alternative.

21.6 Representative edge-case matrix

Scenario	Expected behavior
User belongs to three companies	Context switcher preserves company-specific search, pipeline, and notifications.
Two users try to create same company	Duplicate detection and claim/request process; no silent duplicate publication.
Candidate changes contact visibility after interest	New setting applies prospectively; existing explicit grants handled according to consent text and policy.
Recruiter removed from company	Immediate loss of company candidate/search/message access; audit retained.
Hiring intent closes during candidate sign-up	Return page explains closure and offers general interest or other active roles.
Candidate deletes a video provider link	Embed disappears without breaking profile; recruiter sees unavailable evidence state if referenced historically.
Credential expires	Profile badge changes; candidate notified; search criteria using valid credential update.
Company page is suspended	Public page removed or notice shown; interest disabled; recruiter access subject to moderation status.
Candidate is hired by one company	Profile remains under candidate control; open-to-work status may be updated but not automatically disabled without consent.

Appendix A. Consolidated screen inventory

ID	Screen	Context	Purpose
PUB-01	Public company directory	Anonymous/public	Browse companies and hiring intent.
PUB-02	Public company profile	Anonymous/public	View organization and express interest.
AUTH-01	Create account	Account	Email/SSO initiation.
AUTH-02	Verification sent	Account	Resend/change email.
AUTH-03	Set password	Account	Credential creation after verification.
AUTH-04	Basic personal setup	Account	Name and minimal identity.
AUTH-05	First-action router	Account	Create candidate, create company, or explore.
AUTH-10	Sign in	Account	Global login.
AUTH-11	Forgot password	Account	Reset request.
HOME-01	Universal home	User	Combined next actions and context switcher.
CAN-01	Candidate home	Personal	Profile and opportunity overview.
CAN-02	Profile builder	Personal	Dynamic educator profile form.
CAN-03	Profile preview	Personal	Recruiter-view preview.
CAN-04	Visibility settings	Personal	Discoverability/contact control.
CAN-05	Company discovery	Personal/public	Browse public companies.
CAN-06	Company page signed-in	Personal	Save and express interest.
CAN-07	Interest submission	Personal	Role selection, note, consent.
CAN-08	My interests	Personal	Status and withdrawal.
CAN-09	Messages	Personal	Company conversations.
CAN-10	Assessments	Personal	Take/review assessment.
REC-01	Create/join company	Company	Enter recruiter capability.
REC-02	Company setup wizard	Company	Create public entity.
REC-06	Preview/publish	Company	Publish company page.
REC-10	Company home	Company	Recruiting activity overview.
REC-11	Interest inbox	Company	Review inbound candidates.
REC-12	Talent search	Company	Source candidates.
REC-13	Candidate viewer	Company	Evaluate profile and evidence.
REC-14	Pipeline	Company	Manage stages.
REC-15	Messages	Company	Candidate conversations.
REC-16	Hiring intents	Company	Manage lightweight roles.
REC-17	Company editor	Company	Maintain public page.

ID	Screen	Context	Purpose
REC-18	Team/permissions	Company	Manage members.
SET-01	Account settings	Account	Security, SSO, notifications, data.
SET-02	Company settings	Company	Workflow, privacy, exports, audit.

Appendix B. Recruiter search filter taxonomy

Filter group	Subfilters
Role	Role families; exact roles; primary/secondary role; leadership; open-to-work.
Expertise	Subject, test, discipline, program, counseling area, grade/level, curriculum, standards.
Evidence	Assessment type/score/date; official scores; license; certificate; video; references; verification count.
Experience	Years; total learners; class/caseload size; institution type; management; curriculum design; research.
Teaching practice	One-to-one; group; classroom; lecture; lab; online; asynchronous; special populations; technology.
Education	Degree level; field; institution; graduation year; in-progress; teaching practicum.
Location	Country; region; city; radius; remote; hybrid; on-site; time zone; relocation; travel.
Availability	Start date; weekly hours; days/times; seasonal; notice period.
Engagement	Full-time; part-time; contract; freelance; internship; substitute; volunteer.
Compensation	Hourly/salary/project range; currency; visibility; negotiable.
Language	Teaching language; proficiency; learner-language experience.
Trust	Email verified; identity; credential; reference; background check; company-specific assessment.
Activity	Last active; last updated; availability confirmed; response indicator.

Appendix C. Dynamic question display rules

Rule	Behavior
Core-first	Every candidate completes identity, role intent, expertise, work preference, experience/education, introduction, and visibility.
Role modules	Selecting a role adds role-specific questions; candidate may select multiple roles and duplicate questions are merged.
Evidence prompts	A claim such as official score, license, result, or accreditation triggers an optional evidence request and verification status.
Experience conditionality	New educators receive practicum, volunteer, peer instruction, and training prompts instead of mandatory employment history.
Location conditionality	On-site interest triggers location/radius/work authorization; remote-only candidates are not forced through commuting questions.
Counseling safeguards	Counseling questions remain within professional scope and do not ask candidates to disclose

Rule	Behavior
	protected client information.
Media consent	Classroom/student media requires candidate attestation that permissions are held; otherwise use simulated/anonymized samples.
Contact privacy	Direct details are collected but visibility is separately configured.
Save and resume	Every answer persists immediately or through reliable draft save; users can skip optional questions.
Profile rendering	Question wording is not shown verbatim in recruiter view; answers are transformed into professional sections and structured facts.

Appendix D. Product decisions to finalize before engineering lock

Decision	Recommended default	Why it remains open
Candidate direct contact visibility	Hidden by default; in-platform message; reveal on interest or candidate approval.	Needs legal/privacy and pilot recruiter feedback.
One vs multiple candidate profiles	One active candidate profile per user in MVP.	Multiple professional personas may be useful later but increase complexity.
Company claiming	Manual support-assisted claim in MVP.	Automated domain/registry flow depends on target geographies.
Formal jobs	Optional later; lightweight hiring intents first.	Pilot may show need for detailed requisitions.
Video providers	YouTube first plus allow-list.	Privacy, embedding, and regional access need policy.
Assessment sharing	Candidate-controlled by assessment with company-request override consent.	Balance candidate agency and recruiter value.
Candidate profile view analytics	Show aggregate or named company views only with clear policy.	Could create privacy and marketplace behavior concerns.
Compensation fields	Optional and candidate/company controlled.	Markets use different norms and periods.
Pipeline customization	Default fixed stages in MVP; customization later.	Simplifies pilot learning and analytics.
Exports	Restricted CSV/PDF export for authorized admins only.	Data leakage risk versus enterprise need.

Closing product definition

Evallo Recruit should launch as an evidence-rich educator identity and discovery platform with a lightweight recruitment workflow—not as a broad generic job board and not as a full enterprise ATS. The MVP succeeds when education businesses can publish credible public pages, receive qualified interest, find relevant educators, and make real hiring progress using profiles that materially reduce repetitive screening.
